

How to create an addon domain in cPanel

1. Login to your cPanel control panel
2. Click on the "Addon Domains" icon

3. fill in the following:
 - The "New Domain Name" field: your addon domain (without www)
 - The "Subdomain/FTP Username" field: your domain without the extension (this may be filled in automatically)
 - The "Document Root" field: usually /public_html/youraddondomain.com (this may be filled in automatically)
 - Your password in each of the password fields
 - Click on "Add Domain," and you have your addon domain set up.
